

METAL MAGIC SPOT CHALK *SMALL STAIN?*

Metal Magic Spot Chalk is the perfect product to remove small or stubborn surface stains.

Use it above or below the water line!

Directions for stains below water:

Wearing gloves, gently rub Metal Magic Spot Chalk directly onto the surface stain to build up a layer of stain-removing chalk. Most stains will dissipate shortly after contact. If needed, use a nylon brush or similar non-abrasive pad to help lift stains.

Alternative Method:

Place ProTeam Metal Magic Spot Chalk directly onto the stain, but for no more than 5 minutes at a time, checking stain occasionally. Once stain has lifted, remove ProTeam Metal Magic Spot Chalk. Older or difficult stains may need to be treated with ProTeam Metal Magic prior to use. ProTeam Metal Magic should be used after removal of stains to prevent stains from reappearing.

Directions for stains above water:

Apply a small amount of water onto area being treated. Gently rub ProTeam Metal Magic Spot Chalk onto wetted stain to form a paste. Most stains will dissipate shortly after contact. Brush treated area as needed. Rinse after 1 minute and repeat process as needed. Do not allow rinsed material to dry on hard surfaces.

Each bottle contains two spot chalk blocks that can be dried and reused. Try it on pool surfaces, driveways, coping, or any hard surfaces.

A complete system of pool and spa care products.

It's time to believe in Magic.

Refreshingly simple pool and spa care

It can happen before you know it: metals such as Copper, Iron, Manganese, and Silver build up in your pool water, creating unpleasant stains, damaging your equipment, and diminishing you and your guests' swimming experience.

That's why **Proteam Metal Magic** is here.

Every bottle comes filled with ProTeam's superior quality and unparalleled commitment to excellence. Just look at what Metal Magic will do for your pool:

- Crystallizes and removes metals from your pool water
- Helps lower calcium hardness
- Protects plumbing and equipment
- Removes metallic stains from your pool and your equipment
- Removes scale

Best of all, it's compatible with all types of filtration systems. No wonder it is recommended by fiberglass pool manufacturers all over the country.

People every day are discovering why Metal Magic—and all ProTeam products—are the clear choice in pool maintenance. Isn't it time you discovered refreshingly simple pool care for yourself?

METAL MAGIC SPONGE TEST

Is the stain metallic or organic?

This on-site test was developed to answer this question and provide a step-by-step solution for removal.

STEP 1:

Begin by taking a plastic bottle and filling it with rocks or sand; then add water. Replace the cap and, using rubber bands, attach a sponge to the bottle. The bottle must be submersible.

STEP 2:

Soak the sponge with **Proteam Metal Magic** and place it on the stain under the pool or spa water. Allow the **Proteam Metal Magic** to work on the stain for five minutes.

If the area near the sponge turns yellow, it is an organic stain and should be treated with an algae removal approach.

If the pool or spa stain returns to the original color, the stain is metallic and will be easily removed. Refer to Step 4 for the Metal Magic Treatment Guide.

If there is no change in the appearance of the stain, it is a metallic stain with multiple layers. Re-soak the sponge in **Proteam Metal Magic** and place it on the stain for 15 minutes. If the pool or spa finish returns to the original color, refer to Step 4 for the Metal Magic Treatment Guide.

If the stain is still present, re-soak the sponge in **Proteam Metal Magic** and place it on the stain for 30 minutes. About 99% of the time, the finish will return to the original color. Refer to Step 4 for the Metal Magic Treatment Guide.

STEP 3:

Raise the pool or spa water above the normal level to avoid a bathtub-ring look to the finish.

STEP 4:

Treat the water using **Proteam Metal Magic** and Sponge Test time table.

Five Minutes:

1 Quart **Proteam Metal Magic** per 10,000 gallons of water

Fifteen Minutes:

1 Quart **Proteam Metal Magic** per 5,000 gallons of water

Thirty Minutes:

1 Quart **Proteam Metal Magic** per 2,500 gallons of water

Continue running the pump and filter for three days, frequently checking the filter pressure and backwashing or cleaning as necessary. Metal Magic lifts the metal stain from the pool or spa surface and changes it into a crystal that is removed from the water by the filter. The water may turn milky, indicating the Metal Magic is working faster than the filter. Continue filtering until the water clears.

Proteam Metal Magic should be used with a pH at 7.5 or above. It is not affected by Cyanuric Acid levels. Calcium will be lowered to acceptable levels. Metal Magic is safe to use on all pool or spa surfaces. It will remove the metal from the water before it will remove the stain.
